

Course Project task: Societal Impact

We believe that in the long term, our platform will contribute to building more trust and health services satisfaction in our community, where people will be able to trust their government and feel that their health is in good hands, health services will be accessible to everyone, where all individuals are equals, and no queue priority is given to wealthier people. We believe also that our platform with its recurrent notification system about the latest discoveries, personalized health tips, and also the ability to get cured as quickly as possible, is going to help improve the overall health and wellbeing of the community by encouraging them to develop more healthy habits, therefore reduce the number of people who are struggling with obesity, heart disease, and other health problems.

Our service will allow many healthcare personals to gain work exposure, for example, doctors who are working in the private sector, will be able to handle more patients since our platform will save time for them, and the same thing for dietitians who will be able to reach a greater number of clients on our platform, since hiring a dietitian is not popular at the moment, more people will be able to take care of their life, because of the access of healthy diets, and the price of diet plan will immediately drop due to the increased number of clients. Regarding the regulations, one concern of ours is related to data privacy, which is a quite common topic of discussing during these recent years, even though our platform would not use users' data for business goals, other companies can continue using user's sensitive data for business profit, which will push regulations on data privacy that can impact all other existing platforms.

Our platform aims at saving human lives so it will provide various health services to all people with no discrimination, whether it's about wealth, gender, race, age. Priority in the queue for example can be given only to people whose lives are at immediate risk. It will give this will help all kinds of people

from our society to feel included and have equal opportunities just like everyone else. Our platform can have a positive impact on diversity since it gives more reach and work exposure to all new doctors and other healthcare personals, which can improve our diverse situations

For our service to work, it will need to be in a culture where digitalized material is common and available where people can use mobile applications and access online information, the government should also have citizens and patients' data in digital format, and a digital system allowing the registration of new citizens. In other words, for the system to work efficiently, it should be in a culture where digital practices are popular and common.

Our platform fits perfectly with the pandemic since we will be offering remote health examinations, diet consultations, delivery of e-prescriptions, and many other digitalized services that are related to health, which aims to minimize physical contact as much as possible so we can be able to protect the lives of our healthcare personals, the overall community and give us a better chance to fight this virus. Therefore, the platform will have more users if the pandemic continues much longer.
